DK Bite Type Tube Fitting is manufactured to JIS B2351 & KS B1535 under strict ISO 9001 procedure and Type approved by DNV - Norway.

Standard of DK Bite Type Fitting

Bite type fitting consists of three parts : Body, Sleeve and Nut, and is designed to work over medium and heavy wall tubing. See Fig-i

When tightening nut, sleeve is driven forward on the tube then bites the tube with the edge of sleeve, this is how sealing is achieved and results in internal ridge inside the tube. See Fig-2

Typical Raw Material List

Parts	Carbon Steel	Stainless Steel	Brass
Forged Body	JISG4051 S20C-S48C	SUS316-SUS304	JIS H3250 C3771
Bar stock Body	JISG4051 S20C-S48C	SUS316-SUS304	JIS H3250 C3604
Cold Formed Nut	JISG4051 S10C-S20C	SUS316-SUS304	
Bar stock Nut	JISG4051 S20C-S48C	SUS316-SUS304	JIS H3250 03604
Sleeve	JISG4051 S10C	SUS316-SUS304	JIS H3250 C3604

Fitting Material Pressure Ranges

(Kg f/cm²)

O.D (mm)	4-5	6-22	25-28	30-38	40-50
C.steel & S.Steel	500	400	350	250	210
Brass	250	210	170	150	120

Pressure is rated at ambient temperature.

Allowable working temperature

1. For fitting materials

Material	Temperature
Steel	-40°C to 12000 (DIN 3859)
Brass	-60°C to 175°C
Stainless Steel	-60°C to 400°C (DIN 17440)

Note : temperature limits can greatly depend on the medium.

2. For Elastomer seals

Material	Temperature
NBR (e.g. Perbunan [®])	-35°C to 100°C
FPM (e.g. Viton [®])	-25°C to 200°C
PTEF (e.g. Teflon [®])	-60°C to 240°C

Note : When seal is used in the fitting, compare allowable working temperature between seal and fitting material and apply the lowest temperature

Pressure reduction with temperature

Following pressure reduction is applicable to the rating in the fitting material pressure range for the elevated temperatures.

Materials of fittings	Temperature Range	Reduction of pressure
Steel	40°C to 120°C	-
Brass	-60°C to 175°C	30%
Stainless Steel	-60°C to 20°C	-
Stainless Steel	50°C	4%
Stainless Steel	100°C	11%
Stainless Steel	200°C	20%
Stainless Steel	300°C	29%
Stainless Steel	400°C	33%

Bite Type Tube Fittings

Using the same tube material as fitting is essential for the same pressure reduction, thermal compatibility and corrosion resistance.

Surface Protection

Steel Bite type fittings are black zinc plated. Yellow or white zinc plating is optional. Steel weldable fittings are phosphated.

Stainless steel Bite type fittings are passivated.

Brass Bite type fittings are acid cleaned. Optional chrome plating on brass fitting is available.

Tubing Selection

* Carbon Steel :

Seamless, welded, fully annealed and redrawn tube suitable for bending with maximum hardness Rockwell B72

* Stainless Steel :

Seamless, welded, fully annealed and redrawn tube suitable for bending with maximum hardness Rockwell B90

* Copper :

For seamless coils, soft or light annealed, maximum hardness Rockwell F55.

For straight lengths, light drawn and general purpose, maximum hardness 60 on Rockwell 30T scale.

Note : Do not bend a tube placed in the fittings. This may cause leakage.

Assembly Instructions

Preparing the tube

Tube and Bite type tube fitting are an intrinsic part of a tube system, therefore Dk strongly advises you to take care in handling the tube in order to have the pressure-tight system.

1. Cut the tube square
2. Deburr inside and outside tube end

Tube Bending

Keeping a certain length of tubing straight from fitting shoulder to the starting point of tube bend prevents the deformed section at a bend entering the fitting. This will ensure safety system.

1. Minimum straight length of tube from the starting point of tube bend to the tube end may be 3 times height of the nut

Assembly Instructions

- Step 1. Cut the tube at right angle with a reliable tube cutter and de-burr inside and outside tube end with a deburring tool.
- Step 2. Set a nut and sleeve on the tube. Make sure the sleeve and the nut are facing the fitting.
- Step 3. Lubricate fitting threads and sleeve. Insert tube end into fitting body until it is firmly seated on bottom (fitting shoulder) and hand-tighten the nut
- Step 4. Tighten nut 1-1/2 turns with a wrench by holding fitting body with a back up wrench. Marking the nut may be necessary for counting the number of turn.

Note : In case of thin wall tubing make-up, more than 1-1/2 turns may be required.

Checking up the Bite condition

To ensure pressure-tight connection, all Dk Bite type fittings must be disassembled prior to service to check up if small ridge inside the tube is completely formed around front edge of sleeve. Otherwise tighten slightly more to have it.

Sleeve may rotate on the tube that doesn't mean wrong installation. The sleeve shall be refitted once the nut is retightened.

Note : In case you see no ridge formed on the tube, this would be possibly resulted from not fully bottomed tube or not fully tightened nut. In heavy wall tubing, though you may not see the ridge, the pressure-tight seal is made as far as the sleeve firmly bites the tube and is constrained axially.

One of Dk Bite Type Fitting benefits is reusable many times. Further to check up the bite condition, you need to know how to do reassembly.

Reassembly Instructions

Fitting can be used many times. To ensure this, parts must be clean and free of defects.

Step 1. Insert the tube into fitting body until sleeve seats firmly in the fitting and hand-tighten the nut.

Step 2. Tighten the nut with a wrench by holding the fitting body with a backup wrench until a sharp rise in torque is felt. Further tighten the nut 1/4 to 1/2 turn.

Now the reassembly is complete and ready to service.

In most cases, leakage problem occurs:

1. When the tube is not fully bottomed
2. When the nut is not tightened enough
3. When the tube is of scratches or oval

If you still face a leakage problem even if you went through above 1 to 3, it may be the problem of extremely hard tube which is not suitable for bending.

Note : Steel sleeve is not supposed to be loose back and forth beyond bite point whereas Stainless sleeve could possibly move back and forth due to its more spring-like characteristics.

Safe Component Selection

The selection of component for any applications, system design must be considered to ensure safe performance.

Component function, material compatibility, component ratings, proper installation, operation and maintenance remain the sole responsibility of the system designer and the user. Dk Tech accepts no liability for any improper installation, operation and maintenance.

Note : All the information here are not for design purpose just reference only and the accuracy of information here is not liability of our company.

Ordering Information

Fittings ends and configuration are identified by symbolized letters and the series of numbers.

BJ

Presetting Jig

When assembling Bite type fitting in close corner or in cabinet it may be advantageous to use this jig.

It allows the presetting of sleeve on to the tube in a more open or safe area.

After using this jig, follow the reassembly instruction.

Tubing may occasionally stick in the jig after pull-up. In this case, remove the tube by gently rocking back and forth. Do not rock up and down or turn the tube as this may damage sealing surfaces of fitting.

Safe Component Selection

The Selection of component for any applications or system design must be considered to ensure safe performance. Component function, material compatibility, component ratings, proper installation, operation and maintenance remain the sole responsibility of the system designer and the user. DK Tech accepts no liability for any improper selection, installation, operation or maintenance.
